

Butt Joint Construction

High-Quality, State-of-the-Art Joinery

One of the corner joints DBS offers is butt joint/nailed and glued construction. We use only high-quality, state-of-the-art production equipment to produce this detail. This corner joint works well with all types of cabinetry or furniture where quality and economy are equally important.

Specifications

- Corners are glued and pin nailed
- Sides are rabbetted to ensure dimensions and a clean glue joint
- Drawer sides are full length and nailed into the front and back of the drawer
- The top edges of the sides, fronts and backs are all flush
- Standard bottom construction is let in on four sides. Bottom mount construction is also available
- If a recessed bottom is selected, hot melt is available but must be requested
- This is an economical corner construction and works well with all types of plywood and pre-laminated materials
